

# Recommended Kits for Alfa Laval Aalborg boilers

## Complete service kits to fulfil class requirements

When downtime costs money, availability is everything. Aalborg Recommended Kits protect your budget by letting you plan and minimize your boiler's time out of service. The kits provide all the parts needed to keep your boiler system in line with classification society requirements.

### All the OEM parts necessary

Once your vessel's warranty period ends (typically after two years of operation), it becomes important to keep the right boiler spare parts on board. Aalborg Recommended Kits contain the most common spare parts required for two years of boiler operation.

The kits are based on the many years of experience and qualified recommendations of Alfa Laval service experts. In addition to wear and tear parts, they include the parts needed to fulfil classification society requirements. The parts are all genuine OEM products, designed and manufactured to match your Aalborg boiler system.

### Kit contents

Aalborg Recommended Kits have been developed for individual Aalborg boiler and burner combinations.

The exact selection of parts depends on the boiler system, but a typical kit includes:

- Boiler gaskets and repair kit
- Pump gaskets and repair kit
- Valve consumable parts and spare part kit
- Burner parts, e.g. solenoid valves, Y-jet, nozzles and electrodes
- Electrical equipment for control panel, e.g. relays, flame relays, contactors and timers
- Other gaskets, consumable parts and repair kits

If you have special needs or requests, we can tailor our Aalborg Recommended Kits to meet them.
